

# R-ESSENTIAL 323

Microcapsules with essence that recalls grass smell.

## Fields of Application:

- R-Essential 323 can be applied in natural and synthetic fibers.

## Features:

- R-Essential 323 is a dispersion of activated microcapsules of fragrances.
- The microcapsules are a fascinating process in which microscopic drops or particles are wrapped with a miniature polymeric coating that protects its contents from evaporation, oxidation and contamination until its release.

## Physical-Chemical Parameters:

Aspect	White liquid.
Chemical Nature	Polymer based on microcapsules dispersed in water.
pH (such as)	5.0 – 8.0
Solubility (sol. 10% w/w)	Soluble in water.
Compatibility	Compatible with anionic and nonionic products, however it is recommended previously tests.

## Application:

R-Essential 323 can be applied by exhaustion, pad impregnation, spray, foam, or printing processes on natural and synthetic fibers. The best results are obtained with a concentration 1.5 g/l of R-Essential 323 per m<sup>2</sup> of substrate.

### Initial recipe:

- 5.0 – 20.0 g/l R-Essential 323
- 5.0 – 7.0 g/l Mikracat B
- 5.0 g/l Mikra EF
- 2.0 g/l Mikrafix
- 10.0 g/l Goldsoft MIC

For data of security, ecological and toxicological, see the Safety Data Sheet (SDS).

Note: Given the variety of substrates and applications processes, the information provided with fidelity should be understood as a guidance tool, therefore we cannot be responsible for any damages resulting from an inappropriate use. The data contained in this technical informative are based on current knowledge and applications of our products performed. Additional information can be obtained from our technical department.  
Review: 11/20/2017.
